About us

Diamond Tooling Systems

Welcome to DTS - Diamond Tooling Systems GmbH!

Based in Kaiserslautern - Germany - we have specialized in the development, production and distribution of precision tools equipped with ultrahard cutting materials, such as PCD (polycrystalline diamond), CVD-D (CVD thickfilm diamond), UltraDiamond (monocrystalline binderless diamond) and CBN (cubic boron nitride). As a leading manufacturer for tools with lasered cutting edges, we offer machining solutions in the areas of turning, milling, grooving, drilling, reaming, threading, and tool holding.

To be able to economically process ultra-hard cutting materials such as PCD, CVD-D and CBN on precision tools we realized early on that we would have to move away from the traditional production technology of „grinding“ to new technologies such as the „laser removal process“. This decision has contributed to the fact that our customers regard us, DTS GmbH, as the pioneer and leading manufacturer of lasered tools for machining.

Ultra-hard high-performance cutting materials have a key function in metal-cutting manufacturing. Precision tools equipped with ultra-hard cutting materials are products that require a great deal of explanation. The economical use of the cutting materials is only ensured if the machining process and the cutting material are coordinated with each other.

This is exactly where we at DTS - Diamond Tooling Systems GmbH - step in: Tools and processes are subjected to a comprehensive analysis by our experienced application engineers. Subsequently, the new process optimization is presented to the customer and in the next step, it is implemented in their production. Only in that way is it possible to exploit the optimum potential of our high-tech cutting materials.

Our experienced application engineers are also available to advise you during ongoing production. This close cooperation and mutual trust is the basis of our success.

With more than 25 years of optimization experience in the processing industry, this is where we see our strength!

PASSION FOR DIAMOND...

ultrahard cutting materials at a glance

... is not just a slogan for us - we live this passion in our daily dealings with our customers and we are your partner when it comes to diamond or CBN tools.

CVD-Thickfilm Diamond (CVD-D)

The Star among Diamond Cutting Materials

For the machining of hard-brittle materials such as Ceramics, glass, glass-Ceramics, tungsten Carbide, MMC and fiber-reinforced composites such as CFRP and GFRP. Due to the lack of a bonding matrix, the diamond content is much higher than with PCD. In the group of ultra-hard cutting materials, binderless CVD-D is one of the hardest man-made diamond cutting materials.

CVD-D is characterized by high hardness as well as high wear resistance. These properties make CVD-D the perfect cutting material for machining abrasive materials. Compared to PCD, which is damaged by the abrasive particles due to its soft metallic binder phase, the CVD-D cutting edge remains stable due to its binderless anchoring in the diamond matrix.

With the correct use of CVD-D, the tool life can be increased by up to 10 times (and even more) compared to PCD!

Binderless Diamond (UltraDiamond)

The hardest Mono Crystal

Single-crystal elements are laser-cut from diamond blanks in a defined orientation using laser segmentation technology. This new technology makes it possible, in addition to polycrystalline cutting materials such as PCD and CVD-D, to also braze a monocrystal (UltraDiamond) under high vacuum on any tool carrier. Compared to PCD, the tool life can be increased by approx. 15 to 25 times and compared to CVD-D by approx. 2 to 5 times.

The areas of application are similar to PCD and CVD-D, but this monocrystalline cutting material offers a further significant increase in tool life in all applications where PCD and CVD-D reach the limits of economic viability. The UltraDiamond cutting material makes economical machining of very hard, highly brittle materials such as Ceramics, glass, glass-Ceramics and hard metals with low cobalt binder and nickel binder (<10%) possible.

Polycrystalline diamond (PCD)

The well-known Standard Diamond

PCD is a synthetically produced, extremely tough, intergrown mass of diamond particles with a random orientation in a metal matrix. It is produced by sintering selected diamond particles under high pressure and high temperatures.

Graphite serves as a catalyst allowing the PDC crystals to intergrow. PCD has a high thermal conductivity and good heat dissipation away from the cutting edge. In addition, PCD has the highest bending fracture strength of all cutting materials.

PCD is very well suited for machining aluminum with a Si content of up to 10% and/or other abrasive fillers. The thermal hardness is about 750°C. The areas of application are like those of CVD thick-film diamond, but CVD thick film has a higher cost effectiveness with hard-brittle materials or aluminum from a Si content of 10%.

Polycrystalline Cubic Boron Nitride (CBN)

Chemically resistant and stable at high temperatures

of up to 1,400°C. Boron nitride powder is the starting point for the production of CBN, which has been available since the end of the 1960s. It is produced under high pressure and at temperatures of over 1,500°C and the many different substrates are specifically adapted to the final application.

CBN is now considered the second hardest material after diamond cutting materials!

The applications of CBN take place in the automotive industry, aerospace, tool and die and mold making as well as in mechanical engineering. The wide range as cutting and abrasive material includes hardened steels, cast irons, chilled Cast Iron, sintered materials, stellites, nickel- and cobalt-based superalloys. In many applications, cubic boron nitride is preferred to diamond cutting materials because it is absolutely stable in air at temperatures up to 1,400°C. Diamond, on the other hand, begins to decompose at a temperature of approx. 750°C. Compared to PCD, CBN is also characterized by its chemical resistance to ferrous materials.

Our Cutting Materials Assignment

about the materials

Benefit from over 25 years of application experience with ultra-hard cutting materials.

In the table you will find our cutting material recommendation for each material.

ISO	Material	Green ✓		First choice					
		PCD	CVD-D	Ultra Diamond	CBN-H	CBN-X	CBN-K

Internal Grooving and Special Grooving Systems

your individual request for special tools

Your Notes

On request, we can manufacture internal grooving systems / special grooving systems equipped with our cutting materials.

ECO-Line Indexable Insert 2-edge tipped

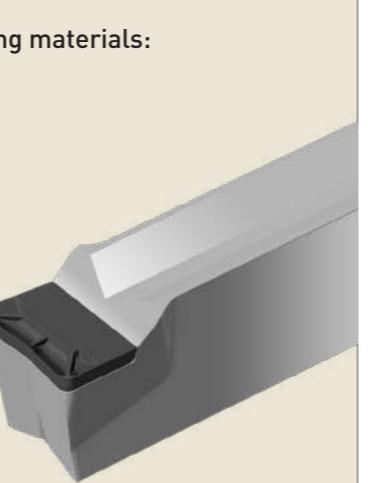

You will find the material assignment from page 8. MICR0-Line Indexable Insert 2-edge tipped

Long Chips from Grooving and Hard Grooving?

We can also laser cut 3D chip breaker onto our grooving tools, to create controlled chip breakage.

With DTS chip breakers you are able to control the chip breakage of the following materials:

- ✓ Aluminum
- ✓ Brass lead-free
- ✓ Copper
- ✓ Plastics
- ✓ Steel hardened
- ✓ Tool Steel

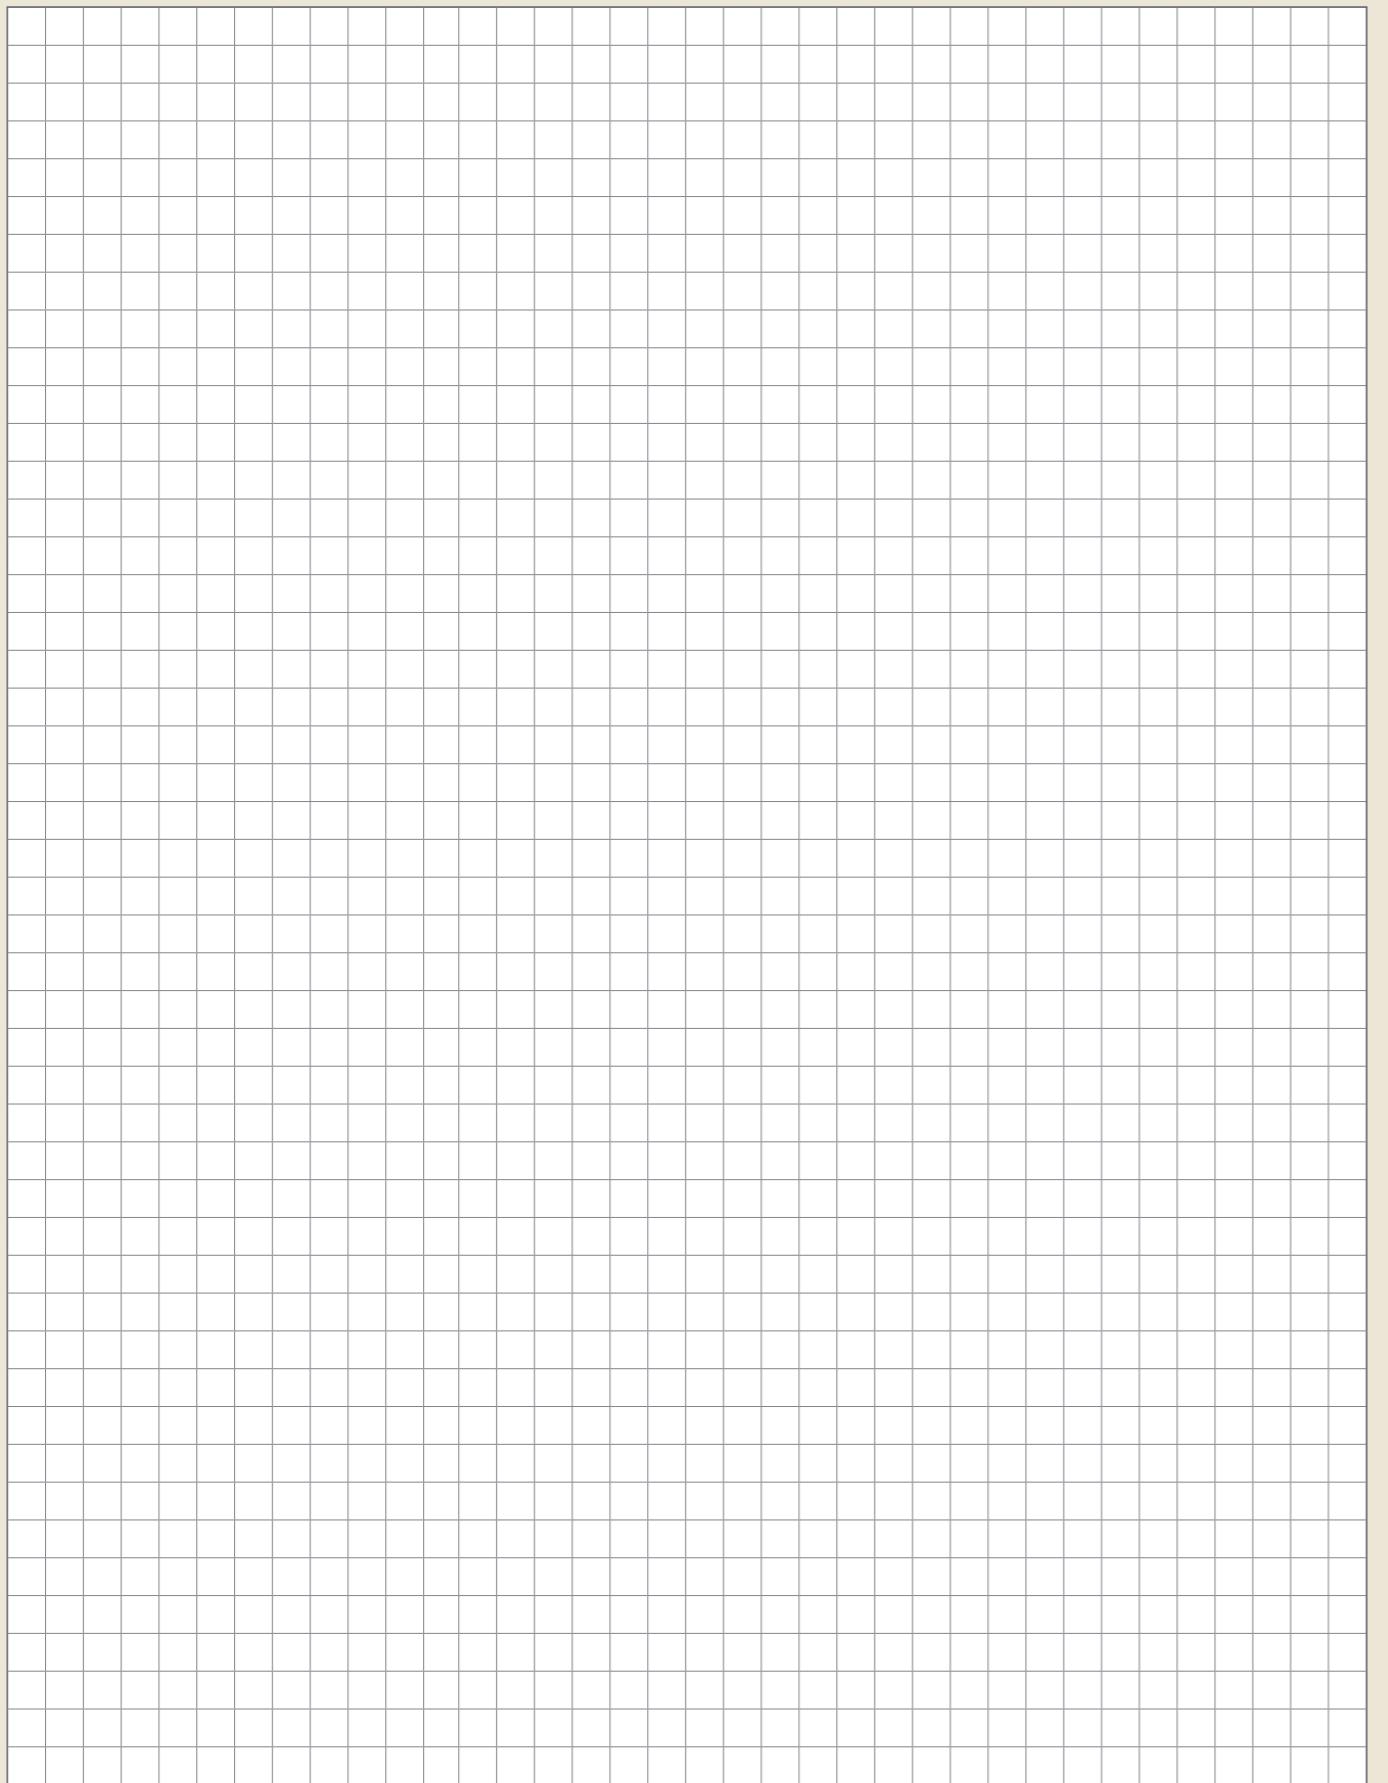

Further advantages of chip breakers:

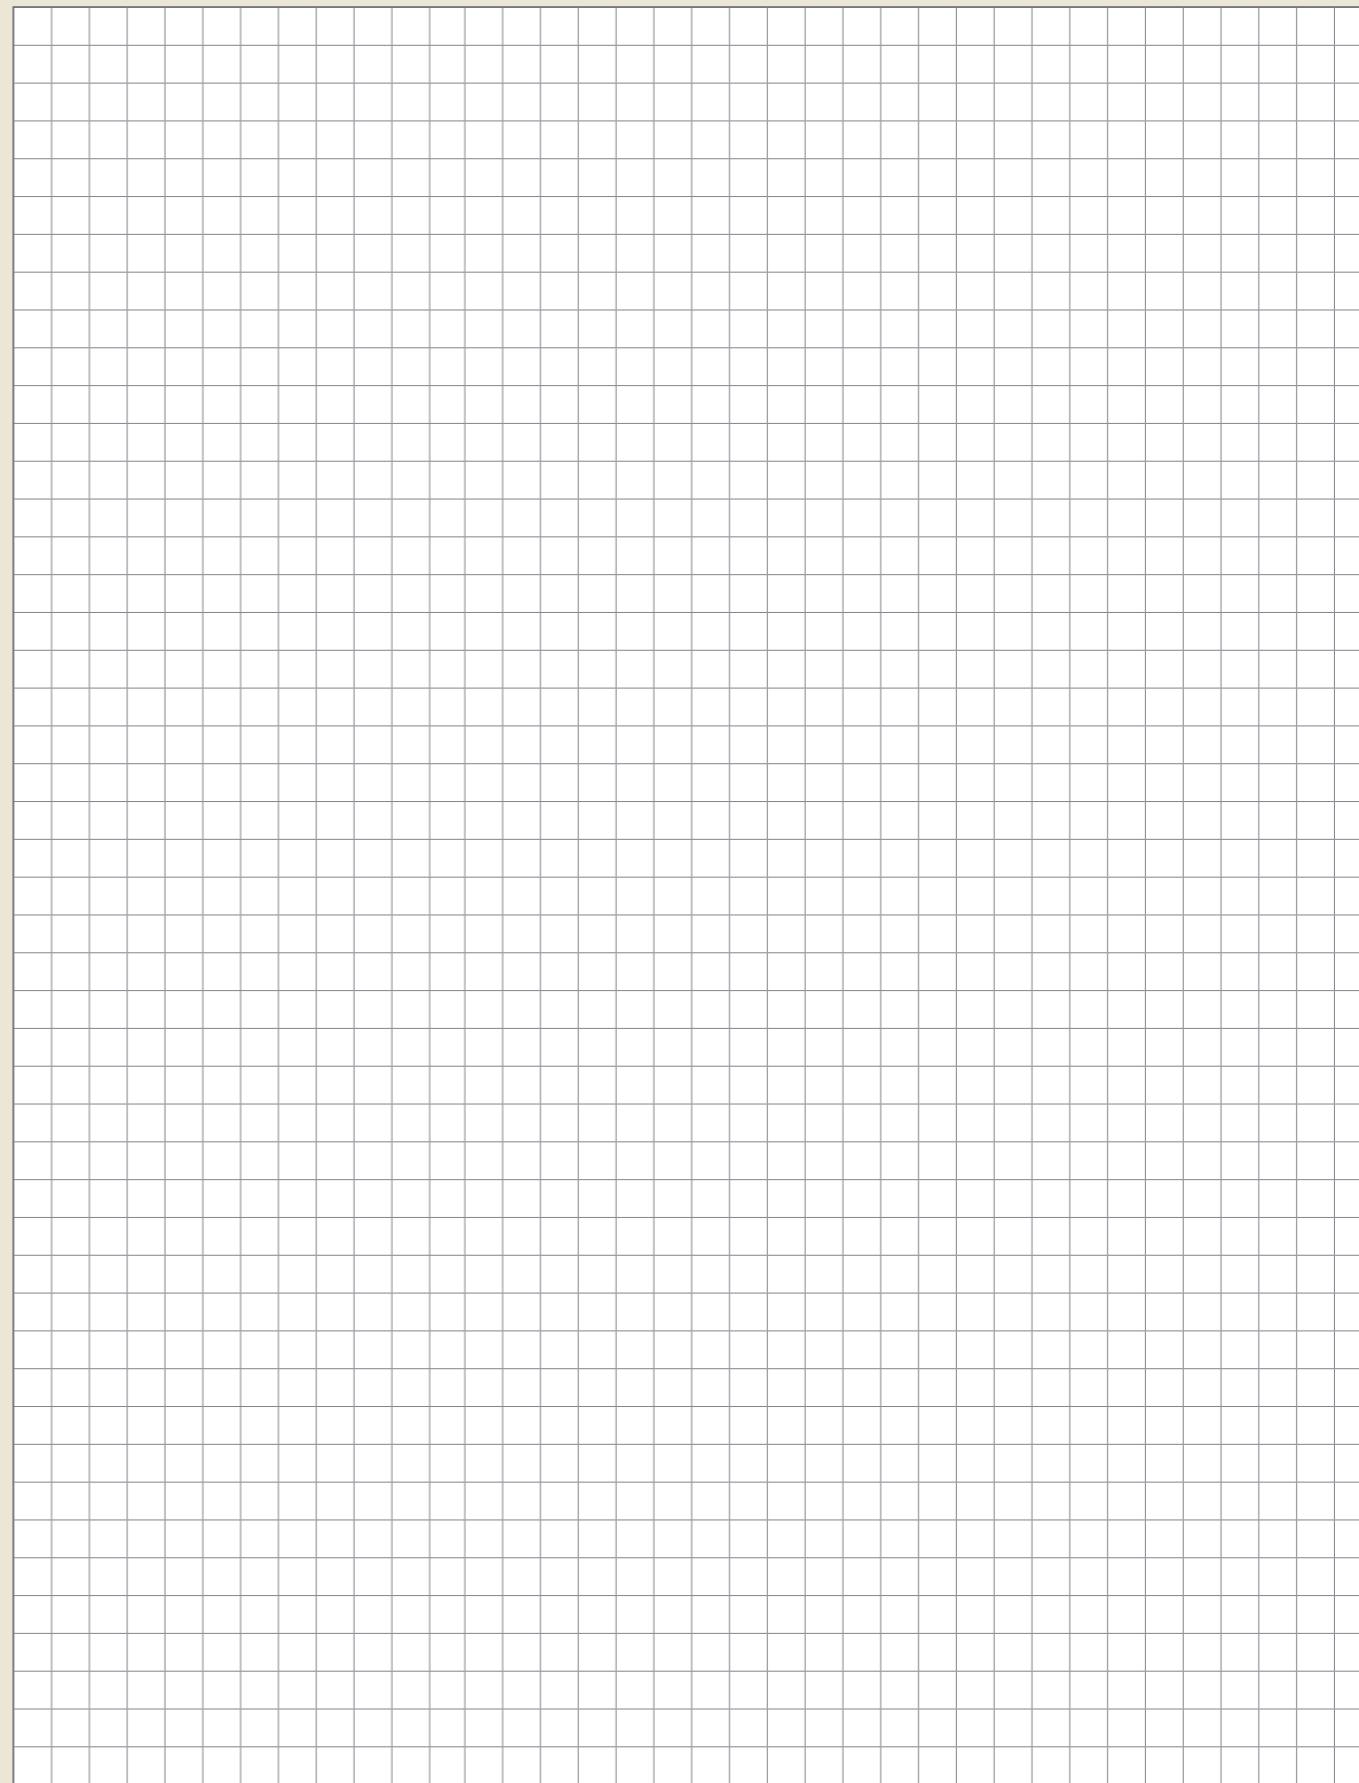

- Cutting pressure is reduced by approximately 40%
- No scratching of the finished surfaces from chips

Special and profile grooving tools are available upon request.

Your Notes

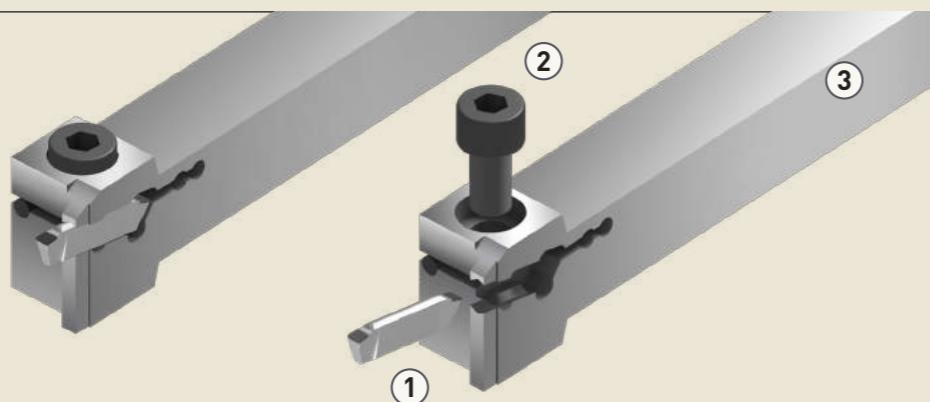

A large grid of squares, approximately 20 columns by 25 rows, designed for handwritten notes.

Grooving System ECO-Line

Overview and Applications

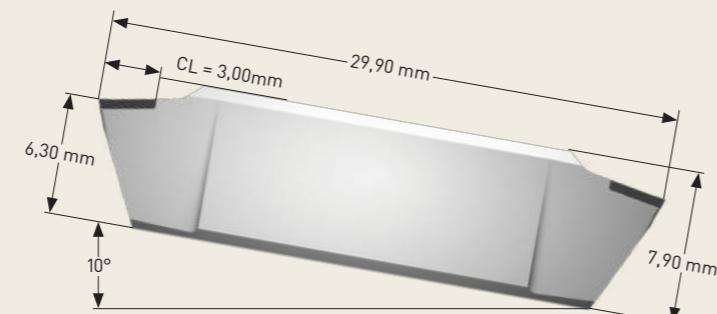

ECO-Line Tool Holder System

- ① Precision machined base body
- ② Screw for clamping the insert
- ③ Low vibration tool holder

ECO-Line - Indexable Grooving Insert

- Laser cut diamond or CBN cutting edge
- High vacuum brazed
- Precision machined carbide base body
- Two cutting edges (Z2)
- In cutting materials: PCD / CVD-D / CBN

Grooving System MICRO-Line

Overview and Applications

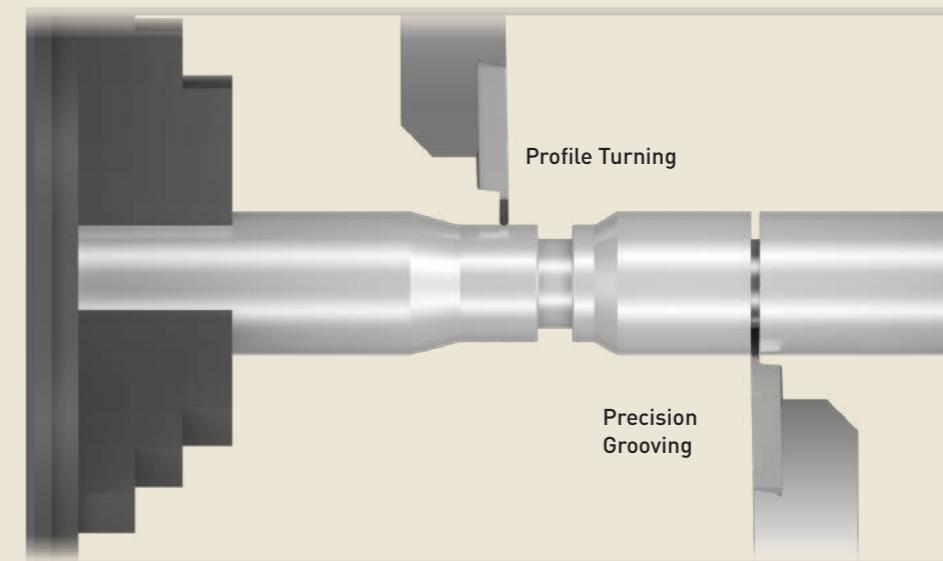

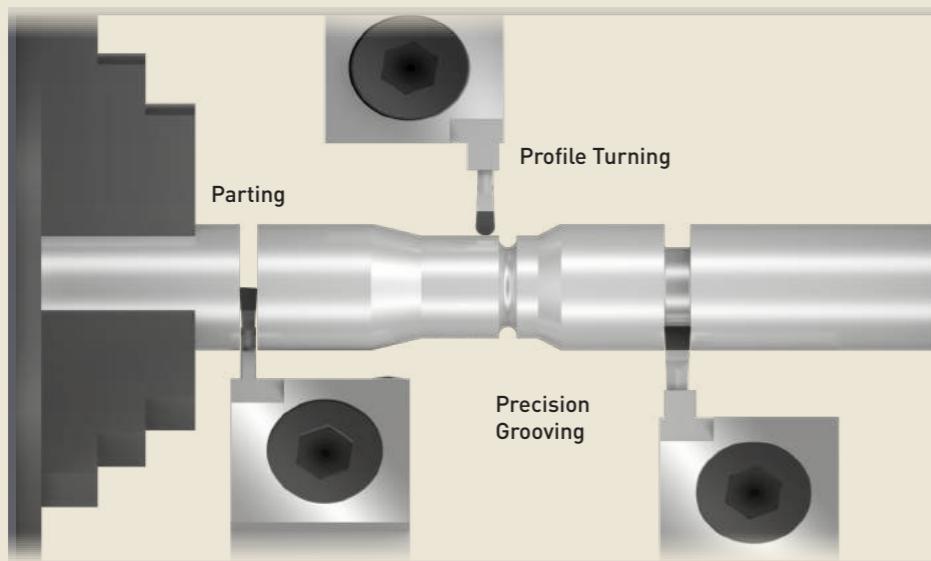

MICRO-Line Tool Holder System

- ① Precision machined base body
- ② Screw for directly clamping the insert
- ③ Precision machined, low vibration tool holder

MICRO-Line - Indexable Grooving Insert

- Laser cut diamond or CBN cutting edge
- High vacuum brazed
- Precision machined carbide base body
- Precision machined center bore
- Tangential clamping provides the best stability
- Two cutting edges (Z2)
- In cutting materials: PCD / CVD-D / UltraDiamond / CBN

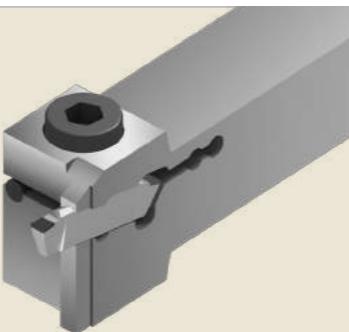

Corner and Full Radius Grooving Inserts

for Grooving, Profile Turning and Parting

ECO-Line System | Toolholder

Benefits:

- Designed for grooving with diamond and CBN cutting materials
- Right and left holders in different dimensions from stock
- Two grooving depths available in stock: 12,00mm and 25,00mm
- For continuous and interrupted cuts

ECO-Line EST and RST System | Corner and Full Radius Grooving Inserts

Benefits:

- Corner grooving insert, width 2,00 mm to 4,00 mm, tolerance +/- 0,01 mm in stock
- Radii from 0,10 mm to 0,20 mm, tolerance +/- 0,01 mm in stock
- Tipped with 2 cutting edges (on request also with chip breakers)
- Full radius grooving insert, width 2,00 mm to 6,00 mm, tolerance +/- 0,01 mm in stock
- Full radius from 1,00 mm to 3,00 mm, tolerance +/- 0,01 mm in stock
- Tipped with 2 cutting edges (on request also with chip breakers)
- Cutting edge length 3,00 mm

ECO-Line AST | Parting Inserts

Benefits:

- Parting insert left, width 2,00mm, tolerance +/- 0,01 mm in stock
- Tipped with 2 cutting edges (on request auch mit Spanleitstufen)
- Parting insert right, width 2,00mm, tolerance +/- 0,01 mm in stock
- Tipped with 2 cutting edges (on request also with chip breaker)

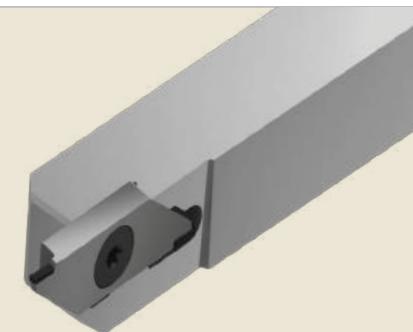

You can get the following materials for our grooving systems:

MICRO-Line System | Tool Holder

Benefits:

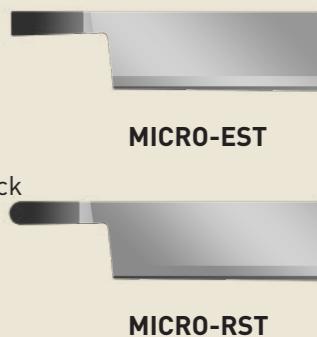

- Designed for grooving with diamond and CBN cutting materials
- Right side and left side tool holders in different dimensions in stock
- Grooving depth up to 3,80 mm
- For continuous and interrupted cuts
- Stable and precise guiding of the grooving insert
- Easy and quick change of the grooving insert

MICRO-Line EST and RST System | Corner and Full Radius Grooving Inserts

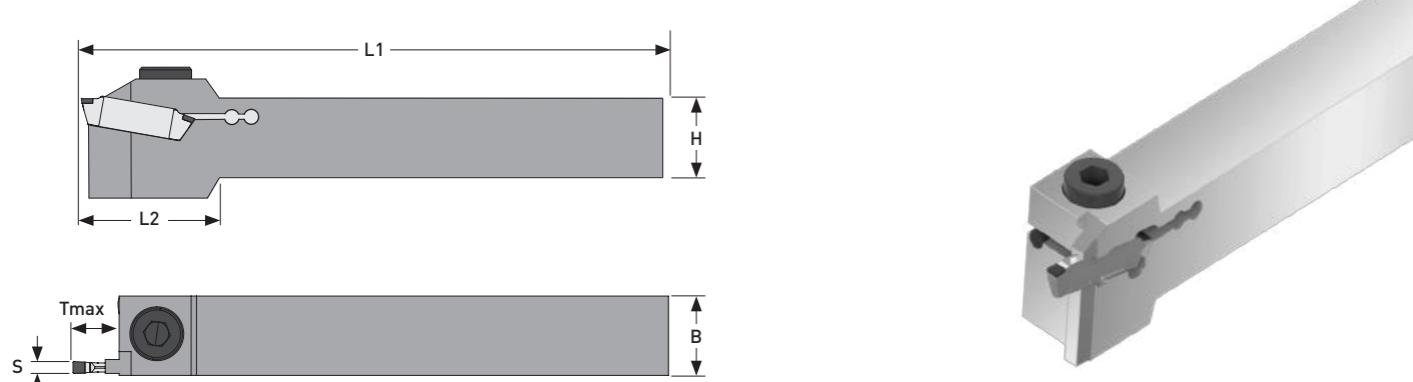

Benefits:

- Corner grooving insert, width 1,00 mm to 2,00 mm, tolerance +/- 0,01 mm in stock
- Radii from 0,05 mm to 0,20 mm, tolerance +/- 0,01 mm in stock
- Tipped with 2 cutting edges (on request also with chip breakers)
- Full radius grooving insert, width 2,00 mm to 6,00 mm, tolerance +/- 0,01 mm in stock
- Full radius from 0,50 mm to 1,00 mm, tolerance +/- 0,01 mm in stock
- Tipped with 2 cutting edges (on request also with chip breakers)
- Cutting edge length 3,00 mm

Clamping Screw 01-SP9090-0801

Clamping Key 01-SP9095-0160

Application range:

● **PCD** Aluminum < 10% Si, Brass, Graphite coarse-grained, Plastics, Zinc ...

● **CVD-D** Aluminum > 10% Si, Carbide > 8% Co, Copper, GFRP/CFRP, Glass materials, Graphite fine-grained, Titanium (Finishing) ...

● **CBN-H** Steel hardened up to 72 HRC ...

● **CBN-X** Tool Steel up to 72 HRC, Stellite, powder metallurgical Steel, Stainless Steel hardened, Ni-, Co-, Fe- and Cr-Alloys ...

● **CBN-K** Grey Cast Iron (GCI), Ductile Cast Iron (DCI) ...

You will find further application ranges in the detailed overview from page 8.

Formulas

Grooving

V_f	Feed rate	mm/min
f_n	Feed per revolution	mm/rev
n	Spindle speed	rev/min
v_c	Cutting speed	m/min
D_c	Cutter diameter	mm
t_c	Cutting Time	min
L_m	Cutting length	mm
Q	Stock removal rate	cm³/min
a_p	Cutting depth	mm

► Cutting speed

$$V_c = \frac{D_c \times \pi \times n}{1000} \quad [\text{m/min}]$$

► Spindle speed

$$n = \frac{v_c \times 1000}{\pi \times D_c} \quad [\text{rev/min}]$$

► Feed per revolution

$$f_n = \frac{V_f}{n} \quad [\text{mm/rev}]$$

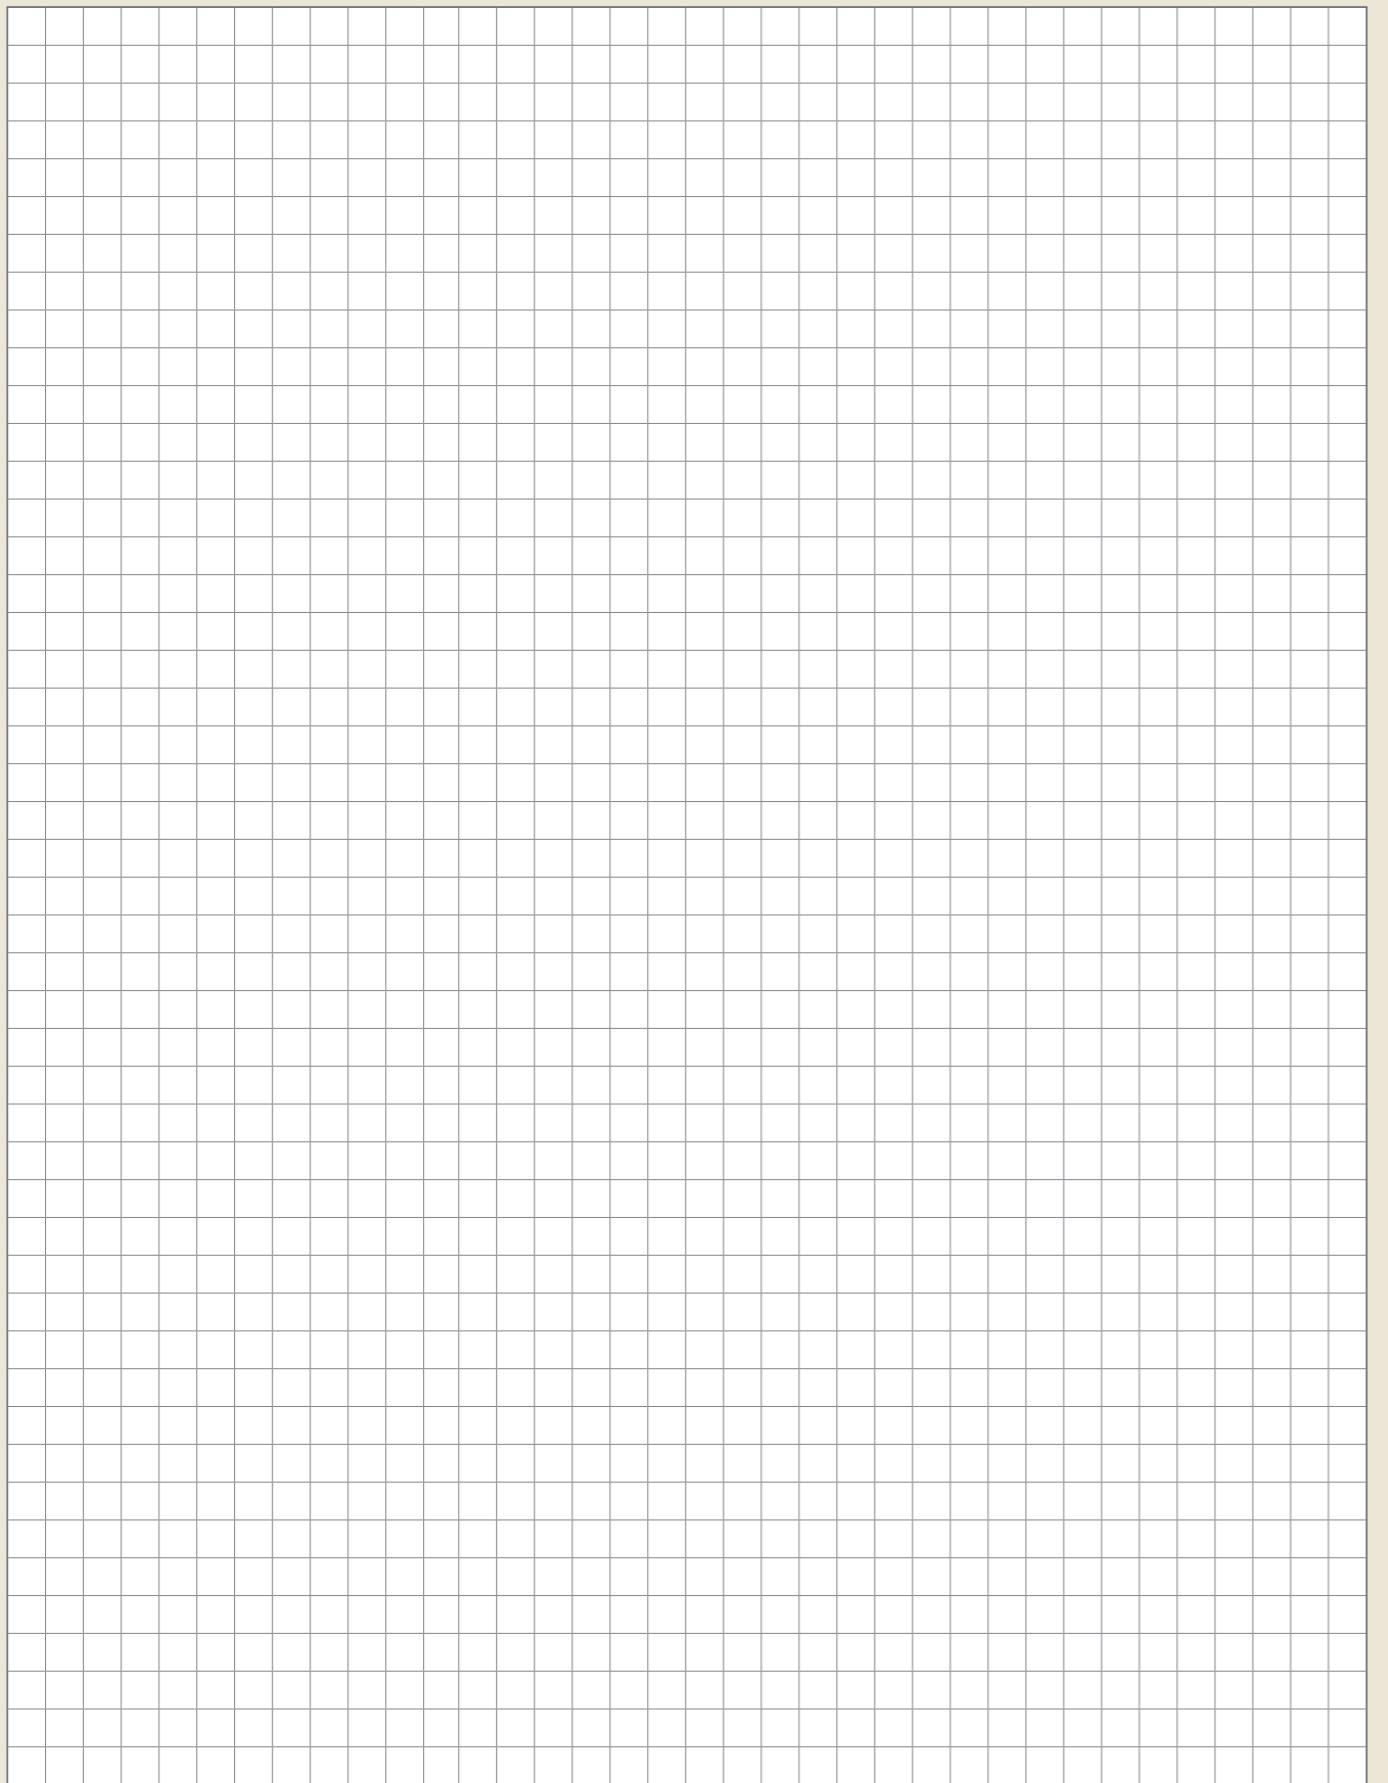

► Cutting time

$$t_c = \frac{L_m}{f_n \times n} \quad [\text{min}]$$

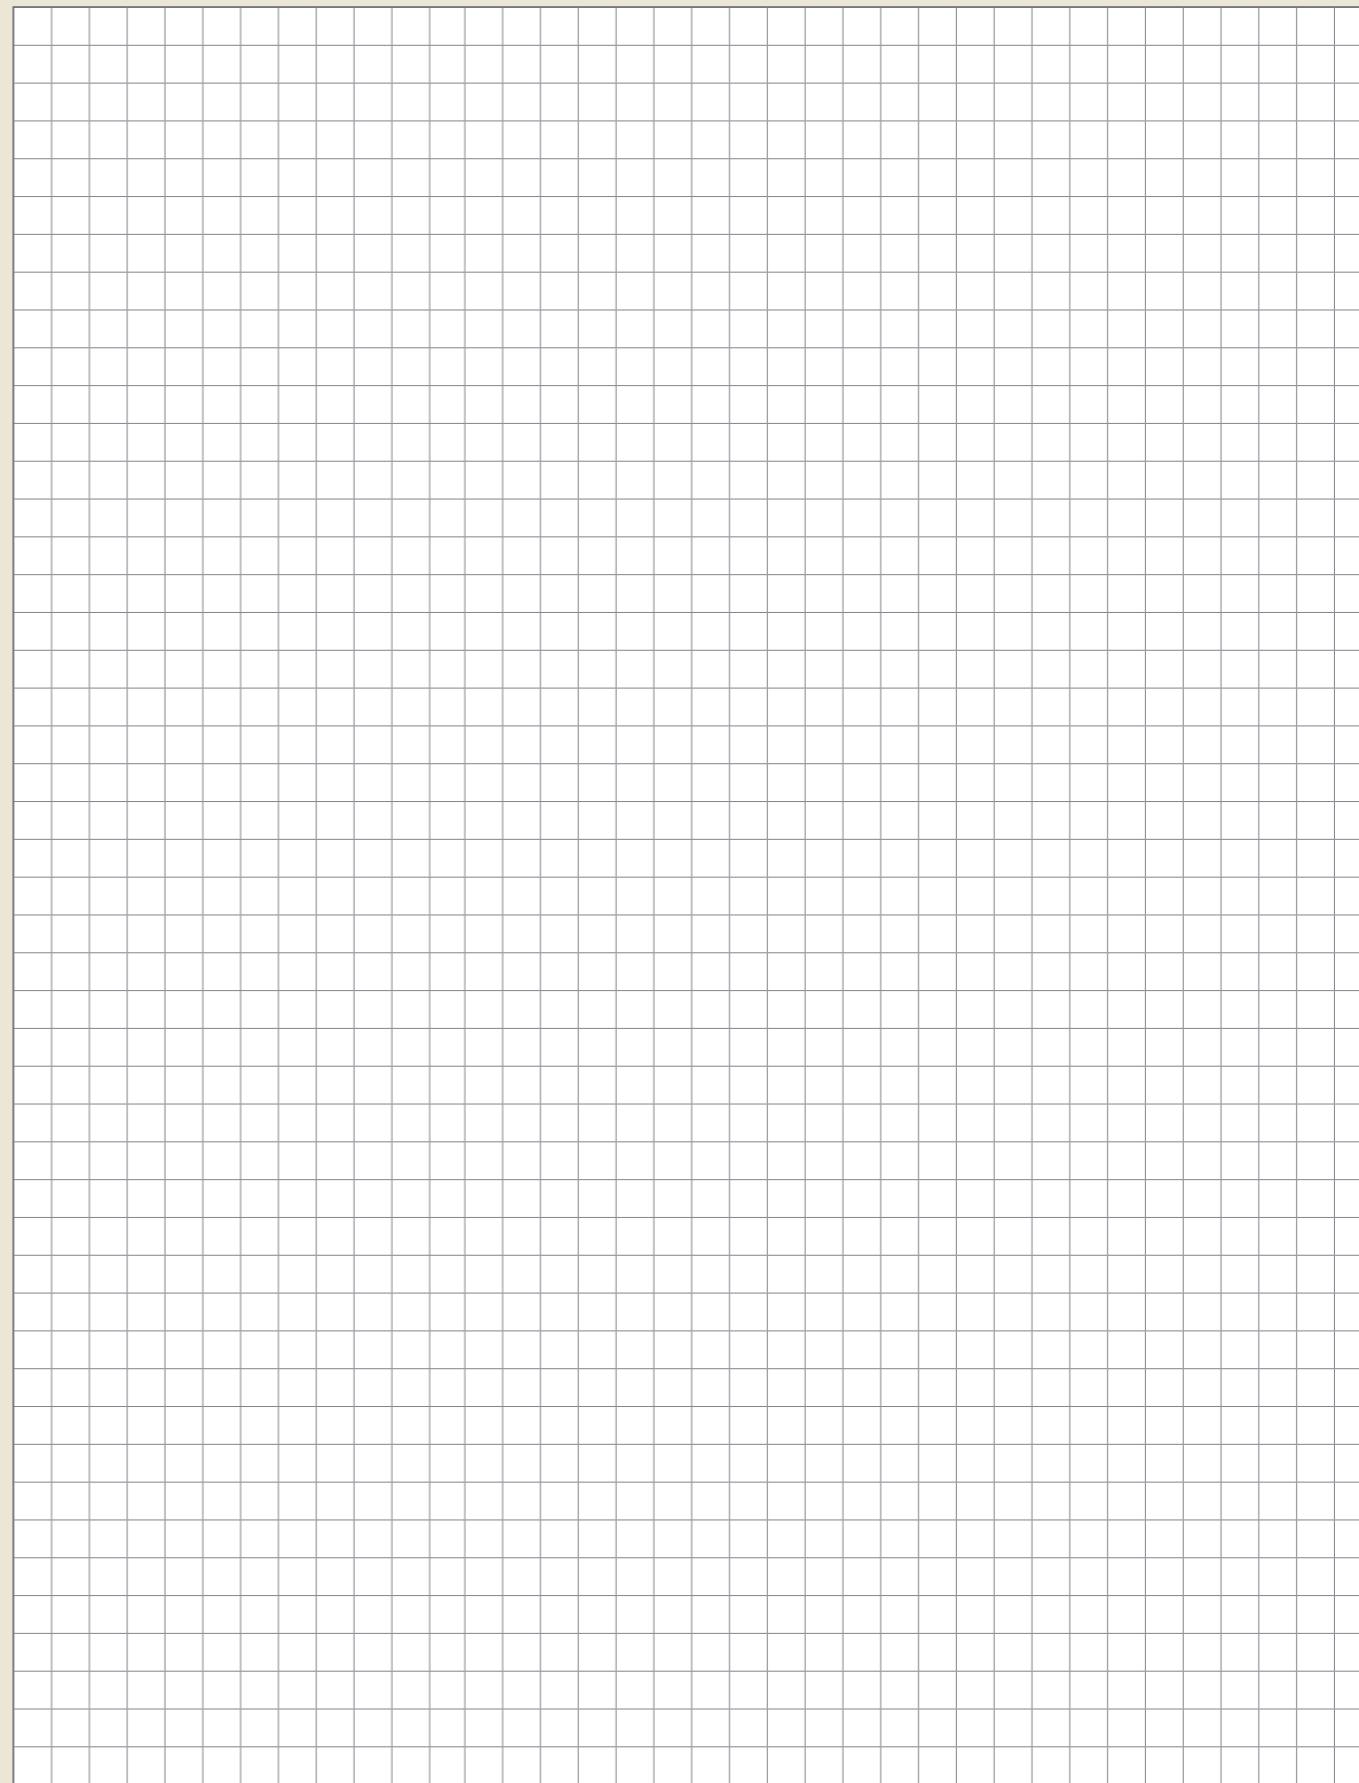

► Stock removal rate

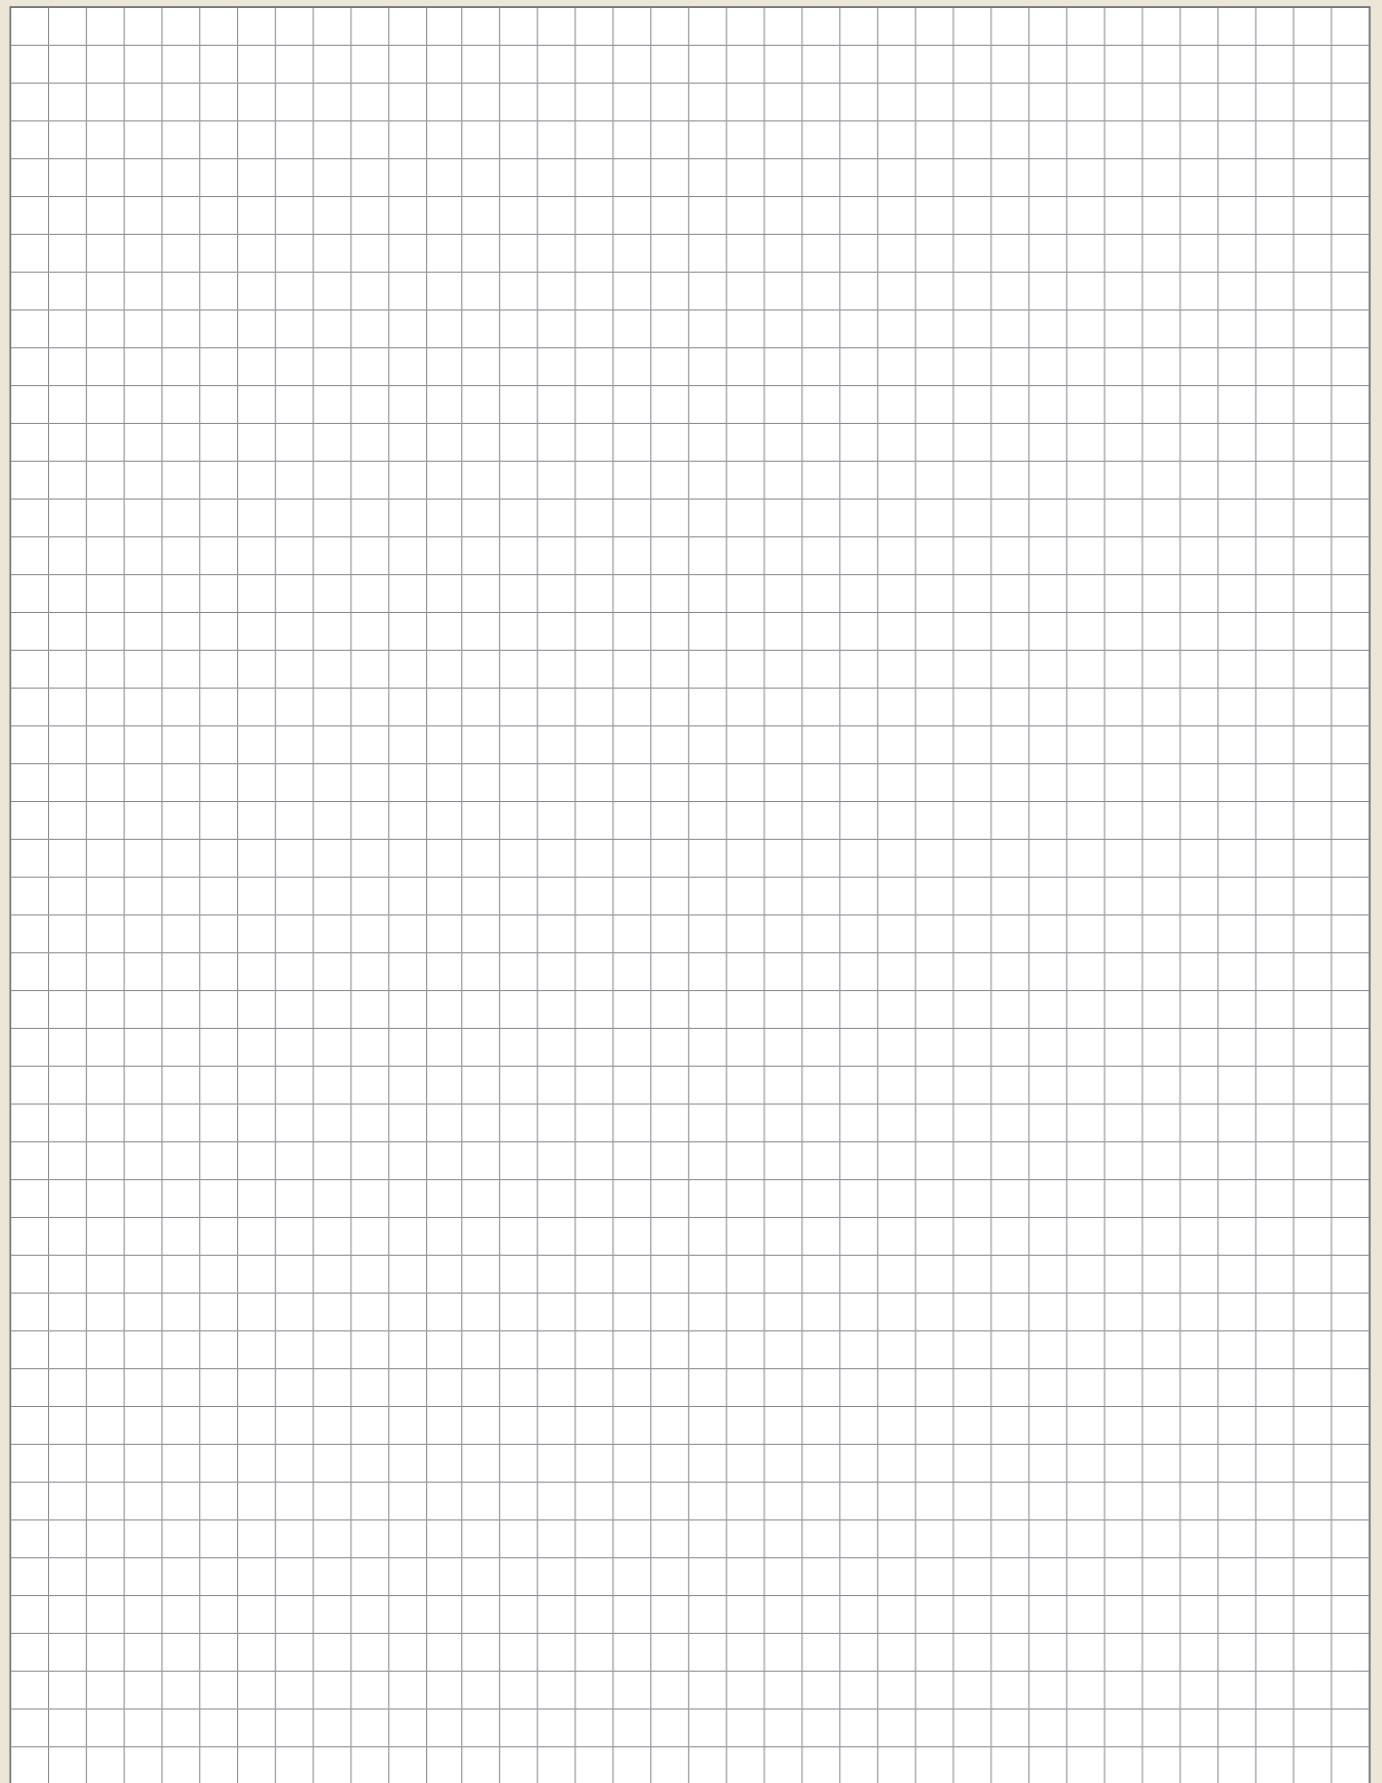

$$Q = v_c \times a_p \times f_n \quad [\text{cm}^3/\text{min}]$$

Copyright:

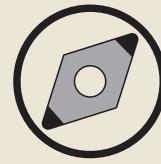

The reprint of our catalogs, copies of our flyers and newsletters or only excerpts such as illustrations, designs, technical information and design require the written permission of DTS GmbH. Copies or only excerpts such as illustrations, designs, technical information from our homepage and our online store are only permitted with the written consent of DTS GmbH.

All rights are reserved. Errors, misprints or printing errors do not entitle to claims. The pictorial and graphic representation of our tools do not necessarily have to correspond to the actual tool in all details.

We reserve the right to make production-related technical changes and changes to the delivery program. The cutting values given are guide values which must be adjusted according to the process environment.

Safety Instructions:

- ▶ DTS tools equipped with ultra-hard cutting edges are very sharp laser cut tools.
- ▶ Careful handling of the tools during unpacking and their use is recommended.
- ▶ Wearing protective gloves reduces the risk of injury.
- ▶ Material chipping and tool breakage may occur during machining, wearing safety glasses is recommended.
- ▶ Balanced holders are recommended for speeds above 10,000 rpm.
- ▶ We do not accept any responsibility for tools that have been modified, reground or used incorrectly and beyond their normal service life.
- ▶ Protective goggles are recommended when using DTS tools, sparks may also occur, make sure that no fire can occur.
